

Rango Lee-Fu

rango.leefu@mail.utoronto.ca | <https://rango-lf.vercel.app/> | [linkedin.com/in/rango-lee-fu](https://www.linkedin.com/in/rango-lee-fu)

Education

University of Toronto – Toronto, Canada

Sept. 2025 – May 2030

BASc. in Industrial Engineering + Professional Experience Year (PEY)

Minor in Artificial Intelligence Engineering

Skills

Software: Microsoft 365, Google Workspace, Miro, Zotero, SolidWorks, LTSpice, Procreate, Canva

Programming Languages: MATLAB, Python, HTML, CSS, JavaScript

Libraries & Tools: NumPy, Matplotlib, Pandas, scikit-learn, Git/GitHub

Experience

Summer Research Intern, SEDLab – Toronto, Canada

May 2026 – Present

- Awarded the Dean's Undergraduate Student Summer Research Pivot Fellowship (\$8,000) to lead clinical systems design projects; selected to present findings on perinatal bereavement care at the UnERD conference.
- Designed future-state Transfer of Care (TOA) workflows for nursing staff at William Osler Health System by applying Human Factors principles and evaluating AI-generated shift summaries to improve communication and safety ahead of EPIC EMR implementation.
- Reviewed and synthesized 60+ clinical guidelines and academic journals to develop culturally sensitive, compassionate care standards for perinatal bereavement care.
- Executed process mapping of current perinatal bereavement workflows at William Osler Health System, identifying critical gaps in hospital policies to inform standardized, culturally sensitive tools and recommendations.
- Trained and onboarded lab members on research devices; including VR headsets, smartwatches, and eye-trackers, to assist in data collection across studies.

Telemetry Project Lead & Driver Strategist, UofT Supermileage – Toronto, Canada

May 2026 – Present

- Led telemetry and strategy initiatives to optimize vehicle performance by synthesizing insights from academic literature and race data into actionable race strategies.
- Created custom Python scripts using NumPy, Pandas, and Matplotlib to process vehicle telemetry into real-time strategy dashboards and analytical tools.
- Developed a scikit-learn Random Forest Tree machine learning model to accurately predict vehicle energy consumption across varying driving conditions.
- Oversaw vehicle field testing, timeline management, and cross-functional team workflows using Git/GitHub to ensure on-schedule milestones.

Mechanical Team Member, UofT Supermileage – Toronto, Canada

Sept. 2025 – May 2026

- Redesigned mechanical parts to integrate electrical components (battery and wiring), improving system reliability and accessibility.
- Developed a new sprocket system to optimize drivetrain efficiency, contributing to enhanced vehicle performance.
- Utilized SolidWorks for CAD modeling and Ansys for stress analysis, ensuring durability under race conditions.
- Responsible for ongoing vehicle maintenance including assembly, installation of new components, and troubleshooting mechanical failures to maintain competition readiness

Power Systems Team Member, UofT Wind Turbine – Toronto, Canada

Sept. 2025 – May 2026

- Researched and engineered a custom electrical load (E-load) system from scratch using LTSpice and Altium Designer,

introducing a new testing capability for the team.

- Conducted circuit design and simulation in LTSpice to model electronic component behavior, optimizing load bank circuitry for thermal management and power dissipation before physical prototyping.
- Conducted prototype assembly and troubleshooting, improving system efficiency and reliability.

Eye Care Consultant, Specsavers Canada – Vancouver, Canada

Mar. 2023 – Aug. 2025

- Performed preliminary eye exams using advanced diagnostic tools, improving patient care and workflow efficiency.
- Assisted customers with eyewear selection and repairs, contributing to weekly personal sales of \$2,000 and team sales of \$20,000.
- Trained new team members on store procedures and sales strategies, enhancing team performance.
- Helped organize several community outreach programs promoting eye care services at local festivals and community centers, reaching 300+ potential clients

Activities & Societies

Lead Deputy Returning Officer, UofT Engineering Society – Toronto, Canada

Sept. 2025 – Present

- Managed the election process for student representatives, ensuring fairness and compliance with regulations.
- Advocated for revisions to election campaigning bylaws by analyzing student body feedback to create a fairer, clearer election process.
- Developed and distributed student feedback surveys, processing the resulting data into actionable recommendations for future election improvements.
- Hand-designed custom stickers with Procreate to boost engagement and drive student participation.
